3d miniature of the highly requested Nürburgring in Nürburg, Germany!

Includes a colored version highlighting the Grand Prix circuit!

AMS and MMU compatible using the .3mf files.

I'm primarily a Bambu user so let me know if the MMU file doesn't work!

Also includes a single-color model.

Collection of all my miniatures: <https://www.printables.com/@jarvizar/collections/1124416>

I have many other exclusive miniatures available for free on **MakerWorld**

Slicing & Printing Details

This model was designed to be printed with a 0.4mm nozzle and 0.16mm layer heights.

Try using a 0.2mm nozzle (0.08mm layer heights) or scaling up for even finer detail!

Note: If roads or smaller details disappear after slicing, try lowering the extrusion/line width of external perimeters (outer walls) closer to 0.4mm OR **use Arachne walls**. Can also try enabling "Detect Thin Walls".

Feel free to reach out if you run into any other issues!

Framing Details

This model measures almost exactly **6.7in by 4.7in** (170.5mm X 119.5mm) and should fit most 5x7 frames (assuming frame lip/overlap is around a quarter inch). Feel free to change the scale/size of the model(s) to meet your needs.

Personally I use these cheap frames from Amazon: <https://www.amazon.com/dp/B0C8HY7YSQ>

And blue printer paper: <https://www.amazon.com/dp/B00006IDQT>

I also included a **fully printable frame** (including a 1mm thick water plate) designed to fit all my miniatures.

A frame is not required! This model looks great by itself and can be displayed almost anywhere.

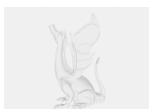

Other Details

Model created in Blender using the [Blosm](#) addon.

See my [Patreon](#) for a commercial license, early downloads, polls towards future models, and more!
