Summary

Modified bracket 10 degrees twisted to the left to hold the camera in a more centered position.

The camera on my k1c was not perfectly centered so I redesigned the bracket with an angle of 10 degrees.

It replaces the original one, just unmount the whole camera (1 screw) disassembly and replace the original bracket with printed one (2 screws)

I suggest remove right panel for better access although is not necessary.

Compatible with K1, K1C, K1Max

Easily print using a few tree supports like below in a temperature resistant material (I used PCPBT)
