Hi!
This is another Electric speed loader for Airsoft.
This is the basic version. You can also get the upgrade package here: https://cults3d.com/en/3d-model/game/airsoft-electric-speed-loader-upgrade-package-to-advanced-version

It counts the BBs loaded and have better ways to control how it is loaded.

It loads about 9-10 BBs per second. So loading a full mag is really quick. This basic version dont do more than loading the airsoft mags. But works great. The motor is so strong that it will push the mag up when the mag is full.

There is a manual included for assembly. The parts needed are also listed in there.

You need to be able to solder.
Shorten a spare airsoft inner barrel.

Threaded insert dimension are:
M3, 5.7x4.6mm
M4, 8.1x6.3mm
I used PETG
4 walls
6 bottom and top layers
15% infill
Tree/organic support when needed.

Note: The video show the upgraded version with screen and programmed counting. This version does not have it.
Change log:
2024-03-25: Updated metal box container measurements in the manual along with a link to the one i got.
