UPDATE 1

Added Case model with Honeycomb pattern on the frame

This Case consists of the main cover and a mini bumper for the cameras that fits between the iPhone 13 Pro and the cover itself.

It can only be printed in TPU, while the bumper can be printed in the material you like best.

The project is in continuous development, stay tuned.

The bottom of the cover on the 3D model is full, if you want to have the other effect (for example Honeycomb), you have to take advantage of the Modifiers. Below the photo of the settings on Prusaslicer in this video it is explained how to use modifiers to perform excellent tricks: <https://www.youtube.com/watch?v=6PVeh43Or-g>

Print Settings

Printer:

Artillery Genius

Rafts:

No
