Summary

Carrying case for first gen Fluke 87

[3D Printers](#) > [Accessories](#)

Tags: [fluke](#) [flukemeter](#) [flukemultimeter](#)

Carrying case for first gen Fluke 87. Room for test leads accessories in the bottom. The parts where the handle is secured has to be glued in place and the bottom compartments also needs to be glued in place.

The top is secured with eight 8x3mm magnets. Very secure.

Updated the model to remove all the guesswork. Every separate part has some type of slot to fit into. All part should be easy to print. The only part that might need some support is the handle. The ends are perfectly round and might need some support and some sanding/filing to fit perfectly
