Summary

Little plugs to fill the hole if you remove the analog sticks

A simple model to fill the holes left when analog sticks are removed. They snap in and sit flush with the front of the device.

Check out my profile for versions for the RGB30 and RP2S.

Originally tested in PLA, 0.2 layer height, 100% infill

NOTE: There are potentially some software control issues with removing analog sticks. I'm working on dummy analog stick "boards" to fix this. Feel free to try it out, but some programs/emulators may not work as intended.
