Summary

These traffic cones are compatible with common clamp building block systems - such as Lego, BlueBrixx, Cobi or CADA.

Hi there,

I have created two simple traffic cones (size 4x4) - round and square.

I used the option "change filament at layer height" in the preview tab (Bambustudio).

If you don't have an AMS, you have to change the filament manually.

These traffic cones are compatible with common clamp building block systems - such as Lego, BlueBrixx, Cobi or CADA.

A few more traffic signs will follow in the near future.

Have fun

Cheers
