Since they were sold out when I needed one, I designed this Quick Swap Toolhead Plate to fit the original Snapmaker 2.0 Quick Swap Kit.

Works perfectly with my 3D-printing toolhead. I would also use it for the laser, but use it with caution with the CNC toolhead, since forces are much higher there, and I have not tested this design with it.

Fits the original M4 screws of Snapmaker or any M4 screws of similar lengths.

Let me know about your experiences and potential issues in your makes!
