Did you buy the drink holder set for your custom Astromech R unit, get it home, and only then realize you can only attach the drink holder while the R unit is fully upright? How are you supposed to serve green milk if the R unit can't move? Jabba would be very displeased. Upgrade your R-unit with this new attachment component, and the unit's back legs can now be moved to the proper 45 degree angle for fast movement while still holding that sweet drink tray! I tried to add back most of the detail, but it's not quite as intricate as the original. Works well though. Just look at how happy that little guy is! Now he'll be able to sneak onto that pleasure barge for sure!

I printed mine using Prusament PLA at 0.3mm resolution with supports. Printed beautifully in just over an hour.

Print Settings
