[instaxminievo](#)

You have a Fujifilm mini evo, but Leica sofort looks cooler with that huge lens dial. Dont fret friend, I got a SOLUTION for you.

Print this model, remove the original lens dial, and mount the printed one. BAM FUJI Sofort, its esentially the same camera anyways :D

IMPORTANT NOTICE : print this model on 0.1 layer height so that the tiny ridges can be rendered by your slicer. Also don't forget to flip the model so the wide part is on buildplate.
