A remake of the included mount for the SNZB-02D in case you want to make extras, and another mount for use on dry boxes. The other mount can also be used on windows, or any time you want to mount the sensor on the interior of something, facing out.

Uses 6mm x 3mm neodymium magnets to retain the sensor in the holder - these are **NECESSARY**, as the sensor will just fall out otherwise.

The front attach mount uses double sided tape or VHB to attach to the surface, then the sensor can slide in and out for use in other locations or for battery changes.

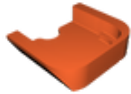

Great for extra mounts, or for monitoring humidity in a drybox or greenhouse using home assistant or other smart home hubs!
