This is a dog bag and treat holder designed to clip onto a Control Leash, a leash that must be threaded through a hole, meaning that a permanent bag holder is not compatible. This holder can clip on and off of the leash easily, and is much more convenient than holding treats and bags in your hands (Often they mysteriously disappear that way) and allows everything needed for a dog walk to be stored in one place. There is even 2 separate compartments in the holder for treats and bags. If needed, the STL named Leash Clip can be scaled up or down to fit a specific kind of leash. I recommend printing the holder in its existing orientation with no supports, but the leash clip should be turned upside down and the lid should have supports. Enjoy the convenience of a dog walk with your hands free! (except for the leash, of course.) Final Tip: the leash clip should be glued with Loctite or a similar adhesive to the holder.
