A simple dice tower with a gate lock and screw cap to keep the dice stored between games, if you don't want to use it as box avoid printing gate and cap and just roll happily, as stated will fit a 15x15x15 cm printbed.

The tower itself should be printed without supports (removing them from inside the ramp would be a pain)

The gate has four small circles at the corners, they are there to avoid warping and should be cut away after printing

The cap requires supports and in my case printed fine standing on a side

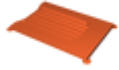

The red one in the pictures looks ugly because the nozzle clogged partially during the print but i didn't try again since it works well enough
