I had a bit of a nostalgic feeling for the old decorated christmas lights, here are some caps to add to the modern led ones to make them a bit more varied in shape.

Spiral, lantern, star and snowflake print fine without support, bell and tulip have a flat section at the end of the light socket that i printed with support I used transparent pla since my lights were already painted, probably colored filament would take away some lumens

I tried to make them snug enough to stay in place on their own but the little lamps have some variations in size (even along the same chain) finding the right fit could require some tests
