BTS Lamp with Korean BTS group

For a light I used cheap LED push lamp with 67mm diameter. Maximum is 70mm. If you want do a lithophane with your image, you need to do:

- Site: <https://tool.itslitho.com/>
- Upload: upload image
- Edit: You can edit brightness or contrast but dark images are good

- Model: You need edit some parameters (see image)

- Download (Lithophane only)

Be sure the lithophane DIAMETER is maximum 85mm! You need to count max thick with diameter so 80mm is perfect.
