Tags: [mount](#) [btt](#) [orbiter](#) [orbiterv20](#) [ebb36](#)

a mount that places the btt ebb36 on the side of my orbiter v2.

this was designed under the assumption that the brass stand-offs that came with the orbiter are installed.

.STEP file provided for modifications.

Print it like a turbiter, with the (orbiter) mount hole side faced flat on the bed.
