## Summary

There are other products for kechain cleaning cloth out there, but i wanted a more interesting design so designed one

There are other products for kechain cleaning cloth out there, but i wanted a more interesting design so designed one.

The inner holder needs to be flipped before slicing.

Best to print with PETG, use supports for the case.

To mount the cloth you need to insert a corner of the cloth into the inner clamp and thread the opposite corner through the outer part from inside out as in the images. then press until you hear the click. You roll the cloth until the tip of the corner is hanging out (use a little more force on the chunky bit) so that you can pull on it to roll the cloth out when you need to use the cloth.

To open it for washing you just press an object like an allen key in the small hole on the opposite side until you hear a click an it just pops out.

I don't have an SLS printer, but if someone wants to give it a try and post a make it should look better
