Hey y'all! I did it again. I designed an other trippy succulent planter. This one features a simple yin-yang with a flower of life background. Comes with drain holes and tray.

No supports or brims required. For best results, print the tray at 0.16mm and the planter at 0.12mm but feel free to play with it. I'm sure it would print at 0.2mm but I'm a quality freak so I haven't tried. If you happen to try one out at 0.2mm, share the make so I can see how it turned out please.

I'm uploading Bambu 3mf's for PETG, PLA(+), and Silk PLA.

Thanks for stopping by! Please like and follow for more trippy designs!
