Tags: [water](#) [led](#) [nano](#) [tanks](#) [shades](#) [aquarium](#)

This simple lampshade for the Dennerle Nano complete 25 LED-lamp prevents the light from blinding you by reflecting the light from the glass lid. Print in PETG (the LED heat may deform PLA) upright without supports at any layer height you like (I used .2). I wrapped the inside with aluminium foil in order to get more light reemitted into the aquarium.
