This is a 5015 blower adapter for easy conversion from stock fan shroud. I took kalrog2's idea and redesigned the adapter fully from scratch to be a bit more robust while keeping all four screwholes usable for fixing the blower to the shroud.

This is already updated to v2 now for more optimized airflow. Big shout out to user Life_Of_Brian who made me aware of a specific issue with the air flow direction of 5015 blowers.

Print Settings

Printer Brand:

Creality

Printer:

Ender 5

Rafts:

No

Supports:

Yes

Notes:

Choose type and density of support structures wisely, otherwise you may have a hard time removing them.

I chose to print without support as I found that this works best for me.

Category: 3D Printer Extruders
