[Household](#) > [Pets](#)

I've created this stand to elevate the feeder a bit. My cat has acid reflux (renal issues) and it's important to not have the food too much lower than it's abdomen.

It's not a perfect solution but it does work and he keeps eating from it.

Compatibility: Make sure the underneath is similar to the 4th picture. Holes must be 15.5cm apart (~6inches)
