### Summary

This is a captive, objective lens cap for the Canon 10x30 IS binocular.

The goal was to create a lens protector that is both secure and captive, but also easy to quickly remove and replace in the field. Securing the elastic to the binocular requires some tedious knot work, but I think the result is worth it.

Print flat on the bed with supports for the the attachment points. I used PLA+ but almost any material should work. Also needed: some 3mm elastic cord and a bit of string.
