### Summary

I had a logitech C270 remix to allow a Wyze camera to be used instead

You'll have to go into the advanced settings and flip the camera image 180 degrees to be able to view it properly. Else it will be upside down. Use supports. V2 might be better than the V1, haven't printed the V2 though but V1 is very tight fit and it becomes pressure mounted. I also had to remove the rubber pads on the bottom of the camera but it works for me. Print it in whatever orientation works best for you.
