Sorry, I just want to make sure people follow the licenses :)

This is a dispenser designed for AA batteries, though AAA might work! If someone tries, Comment! I don't want to empty mine.

Also due to the nature of stacking cylinders, the batteries will slip sideways sometimes and an empty is required, or sometimes just a good shake gets them in line!

I would not use glue, as I like the ability to take it apart for faster loading or battery alignment.

Print Settings

Printer Brand:

Prusa

Printer:

i3 MK3 MMU 2

Rafts:

No

Supports:

No

Resolution:

0.20mm SPEED

Infill:

20%

Filament: Flashforge PLA works fine I did mine in red, it doesn't really matter

Category: Office
