updated 3. 4. 2024 | published 3. 4. 2024

Summary

Skadis board for steel shelves, less filament

[Hobby & Makers](#) > [Organizers](#)

Searched alot but no luck so i do it myself, less filament than original but still stable

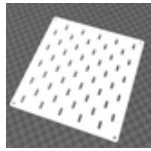

- Use original Bolts and Nuts of your steel shelves
- Honey comb holes have same dimension with HoneyComb from RostaP, but i didn't test with his components, you may try it but i'm not sure because depth is different

Infill: 15%

Layer height: 0.24 (i use 0.4mm nozzle, you may use higher layer height with bigger nozzle)

- Highly recomment beg and basket from Kim-Janosch and SkadisHook from PRINTSY

This remix is based on

IKEA Skadis

by Johination

Skadis Hook

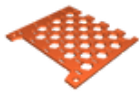

by PRINTSY

Skadis/ SKÅDIS universal peg

by Kim-Janosch
