Ceiling lamp shade.

on photo its printed in black PLA, this is pretty dark as it absorbes most of the light.

i recommend printing it in a lighter color, beige or white distributes the light way better!

lamp shade is printed in vase mode, this way its pretty thin, or else 1 wall layer thickness.

ring can be glued on the top of the lamp shade. the socket can be glued aswell if necessary.

[cable and socket used](#)

[Lamp \(230V\) used](#)

in the ceiling mount there is plenty of room for some connectors to the mains power, also to realign the hole.

i used small screws, as it is just PLA and not at all heavy. lamp heat doesn't affect plastic, alternative could be ABS
