This is a carry case designed for [Mystik738](#)'s version of Catan over on Thingiverse. (<https://www.thingiverse.com/thing:2416602>)

I designed it to fit the base 4 player set perfectly but if you print the extra variants of the board pieces you should still be able to fit them in the designated slots.

The whole thing is designed to be printed on a FDM printer so you shouldn't have any issues no matter what printer you are using as long as you print in the correct orientation. (Pictured below in the CAD images)

The diamond pillar should be printed in vase mode.

0.4mm nozzle, 0.24 layer height and 15% infill allowed me to get the whole box printed using one 1kg roll of filament.

Letters on the lid came out well for me on my Ender 3 Pro using PrusaSlicer and having them unsupported but I have included a blank lid and extra text if you prefer to print and stick.

I used (<https://www.printables.com/model/542129-toggle-latch-no-supports-print-in-place>) Clips and just glued them to the sides.
