updated 3. 4. 2024 | published 3. 4. 2024

### Summary

This single-part print will drop into the slot of a 3030 and remain at an angle for storing, or slipped out for use.

Tags: [3030](#) [touchscreen](#) [btt](#) [ratrig](#) [hdmi5](#)

The only assembly required is fastening the display into the case, using 4 pcs of M3 hex socket screws, length 6 mm. These will screw into the back, using the standoffs on the display.

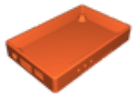

Design by [M3D](#).

Works just like the case designed for the HDMI7 below.

Print settings (0.6 nozzle):

- Layer height 0.3
- Set 4 bottom layers, 0 top layers (this will improve stiffness, while reducing material)
- No supports
