It's finally easter and the bunnys are jumping all over the place and laying eggs (?). It's a interesting concept and my contribution might make it more so. This is the Spiral egg inspired by the spiral filament vase . It gives you the chance to make a multicolor print without a multicolor printer. Just simply slide a strip of filament down the guided tube and cut it off at the desired length. Use all the color combination you can think of! My combinations a kind of "plain" but you could make a rainbow-egg, maybe with a unicorn hidden inside?

Disclaimer: The candy in the pictures can not be printed.... At least not eatable candy....at least not with a plastic 3D-printer.

Prints without support and with a max of 0,6 mm nozzle (for the guide channels to work).
