In case you encounter a problem as I did:  
you somehow have to clean your indoor stone garden because of your  
dogs (or other pets) hair.

Here's a simple Dyson Nozzle with a grid to vacuum and later pick up the  
collected dirt.

To be specific it's for the [Dyson Crevice tool](#).  
You won't need support and PLA is enough to do the job.

Hope that helps
