Summary

Because some of us just want everything to be gridfinity and we're not ashamed of it.

Model that I made to store #gridfinity items underneath my workbench. I have tons of little things that I don't always need, so I add them to these boxes.

Print two solid frames and use it like a slider. I have a hinged version that I'm in beta for right now that I might release later.

The deep boxes are designed to stack up to 9 units deep, whereas the standard holds 6 units.

Printed at .25mm layer height, five walls, five bottom and top layers (that's where all the strength needs to be, but only like 5% infill because there really isn't any infill).

Hardware is just standard 1" wood screws.

I hope you enjoy it!
