[remotecontrolholder](#)

Just a small holder/stand for the newer Shield TV remote controller. The new remote is so much better than the old one, however, it doesn't stand upright due to its triangular shape. This small dock is just the perfect solution.

It was designed to be printable easily and in a short time. Mine was done in PETG, .2 layers and about an hour and a half worth of printing. Could use some finer layers at the bottom, so that the detailing looks better. Maybe, adaptive layers would be a good option. PLA or ABS/ASA is also good, the part is more than enough robust by design, so material strength is not a deal breaker with this print.

I've included two additional designs, with added in nVidia logo on one or both sides. These weren't tested yet.
