updated 11. 1. 2022 | published 10. 1. 2022

### Summary

Exact template for Prusa SL1S resin vat if you want to use any FEP that hasn't been precut.

Update January 10

I created a highly accurate .dxf/svg file of the SL1S precut FEP sheets and based this design off of that.

Use double sided tape to hold the template down onto the protective plastic covering the FEP. I used a 2mm Leather hole punch to make the holes. Cut the outside if you want, but it may be easier to trim after it's attached to the tank, whichever your preference.
