I return to my fantasy ruin modular set, this time for small buildings, or rather, Crypts!

I continued to minimize wasted material on supports so I continued the modular wall concept. To reduce the overall time and support material I decided that all the major height pieces would be cut in half to lay flat on the printer bed (intended for FDM Printing).

This is the result, I hope you enjoy it!

The freebie files available here, are the bare necessity to start making Crypts for use in skirmish games. You can make a lot of different shapes and battlefields just with these free files. However, if you are looking for more variety in wall sections and accessories you can buy the additional files shown in some of the images.

Your Options:
The Freebies (this listing)
The Basic Crypt Set: pandorasbox.gumroad.com/l/FR_Crypts (All paid sets can be found at the same link)
The Ground Floor Deco Pack
The Upper Floor Deco Pack

Be sure to check out the rest of The Series to get your hands on additional free building blocks!

Base Files (WarCry 2019 Starter Set Proxies)
Fences (Various versions, metal, stone, wood, etc)
