Tags: decoration bathroom qtip drums bathroomaccessories drummer taiko

This design portrays a figure positioned to strike a taiko drum, doubling as a practical q-tip holder. The hollow drum serves to store q-tips, while the hands of the figure are designed to hold a single q-tip, split in half to replicate drumsticks.

This q-tip holder consists of four separate parts: the base, the figure, drum and a separate rack part. The hands of the figure feature hollow sections designed to hold half q-tips, which may require a small amount of glue for permanent placement. If you intend to print the holder in a pre-assembled form, some modifications to the design might be necessary for optimal fit. A STEP file is included for making these adjustments.
