Hi !

The Aputure Amaran AL-M9 is an excellent small LED light for photography and video. Compared to its size, it is characterized by high brightness and long operating time.

The magnetically attached white diffuser ages and cracks over time. Much sooner than the llama's battery is permanently destroyed. I designed this model to replace this diffuser.

If possible, print from white light-transmitting but not transparent filament. When gluing the magnets, make sure the correct polarity. I made both an original and a rimmed version. I glued the magnets with UV glue. It needs a very small amount of glue. I tested it.

If you find the model useful, please give it a like. Thx!
