Summary

Grip for Xiaomi scooter handlebar. I have first version of the scooter, so it might be different size in your model.

Keep in mind that handle size/slot might be different in different xiaomi scooter models.

This was designed for first edition of it. I believe it should work in other also.

There is no "L" nad "R" as in original model, if you want the pattern to go in different direction, you can flip the model in your slicer.

I have used TPU. 0.2 layer height. 2 wall loops and 3 top and bottom layers. I used Concentric surface pattern. you can use what you want. If you don't mind a bit squishy end of the handle than 15% infil with grid pattern should be fine.

This remix is based on

Poignée trottinette Freestyle (Odi remake) - Handlebar
