Bolt together case for the PineTime Dev kit

Needs 4x M2x10mm cap screws with 4x M2 hex nuts

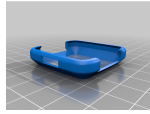

I designed this for resin printing, might work with FDM, though I haven't tried.

The button is accessible and fits almost flush with the case, making it a little more difficult to accidentally bump it. That was an issue for me, as I work with my hands a whole lot, probably not a bigger deal for most software people I think

This does not fit with the stock charger, so you will need to keep an allan key around to charge it up. I am working on a remake of the charger to fit with this model so that won't be needed, but that is TBD still.

STEP and STL models are available to anyone who wants to remix.
