### Summary

Prevents small parts and tools from getting sucked up

Use to clean up a work area without having to first remove tools and small parts. Works great!

If it gets clogged just turn it around and let the vacuum suck it out.

Printed in PLA .2mm layers with brim. I used a zip-tie to clean out some stringing in the holes. Just stick the zip-tie in the hole and rotate it to break up any strings or to push out something that got stuck.
