Model Info | Introduction

I want to introduce you to an easy-to-print, hanging plant pot (including drainage tray) I designed to make room for new herbs. Three pieces just slide in, no screws, no adhesive or whatever is needed. Timeless and easy design - rich in functionality and suitability.

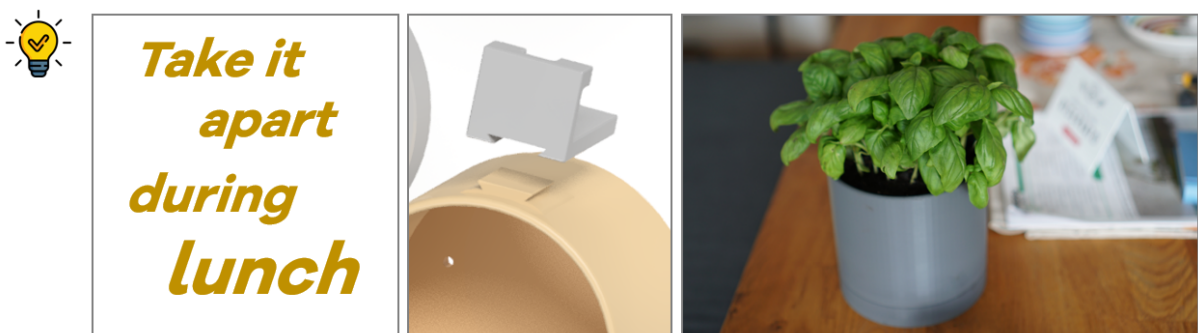

New in v2: with option to hang or drill! Just use your slicer to separate the hanger (function "split to objects") and use it as a wall mount!

It was specifically designed to be placed on any object I found outdoors :)

Easy to assemble and disassemble - place herbs / plants on your table during lunch time.

Print Settings

It was designed for easy printing and should work just right away :)
