Tags: [ship](#) [warship](#) [battleship](#) [aircraftcarrier](#)

An aircraft carrier that my friend made on ROBLOX for roleplay purposes. I simplified it down for 3D printing. It is heavily based on, but is not exactly, an Invincible-class aircraft carrier.

Use Prusaslicer's cut function to print the bottom of the hull upside down and the rest of the ship upright. You can also use the color change feature to print the black stripe and red part.

Use supports all around the bridge and radar dish, and underneath the front two corners of the flight deck. It is also highly recommended you add mouse ears to the bow and two corners of the stern to prevent warping (like what happened with mine). Note that the radar dish is so small that mine broke off.
