Summary

Needed a mount for the excellent ATX4VC (ATX power supply for Vintage Computers) to go in my case.

[Hobby & Makers](#) > [Electronics](#)

Made a couple of different versions, the latter to use in a Powermac G4. There is a place you can use for strain relief of the wires exiting from the terminal block, if you wish. I would use a typical tie wrap.

Would probably do this in PETG or something more heat resistant than PLA.

The link to the github for the ATX4VC project is <https://github.com/dekuNukem/ATX4VC/blob/master/README.md> (I am not affiliated with the creator/manufacturer, just a customer).
