### Summary

Very snug fit. Cutout is exactly contoured to the Z plate and should minimize wiggle. Tolerances are tight, use force.

Reuses all of the original hardware except the M4 bolt embedded inside the original insert.

Only non-original part needed is a long M4 bolt. The pulley will hold it in place while you line up and tighten the insert to the nut outside.

You don't need to print the knob cover, it's purely aesthetic
