Summary

A quick connect adapter for the WeCreat Vision laser exhaust port

The exhaust hose on the WeCreate Vision laser sometimes needs to be taken off for maintenance. The hose clamp on the the exhaust port can be difficult to get to when its against the wall. The solution is a quick connect adapter. Disconnecting and reconnecting the exhaust hose is no longer a pain. I made it using PETG to make it long lasting and more resistant to higher temperatures than PLA.

Print settings:

Filament: PETG

Perimeters: 3

Layer height: 0.2 mm
