Introducing BugBox, the perfect homestead for insects in your garden or yard! BugBox is mold and heat resistant, due to vents on the back that prevent the enclosure from overheating & getting too humid.

**WARNING: DO NOT PRINT WITH MORE THAN 70% INFILL!** The BugBox won't dissipate heat fast enough if there is too much infill, which cooks any bugs that come into it.

### Print Settings

Infill: 20%-50%

Supports: No

Adhesion: Doesn't Matter

## Post-Printing

### Clean and Prime the BugBox

To make sure the BugBox is a safe environment for your bugs, make sure that there are no strands or blobs of filament lying in the way of the heat vents. Rub a sterile microfiber cloth along the surface to remove any harmful bacteria, and put your BugBox outside!

(PS: You can cover the BugBox in a non-toxic waterproof seal to stop internal mold growth.)

### BONUS Step!

If you want, you can bait bees and other insects to come to the BugBox with some flower petals inside the honeycomb structure!
