Summary

The perfect way to bring your favorite wildlife species into your home!

[World & Scans](#) > [Animals](#)

Tags: llama elephant lion panda camel giraffe rhino hippo gorilla wildlife polarbear sloth kitcard meerkat lemur

Wildlife Conservation is a topic that has been very near and dear to my heart since I was a small child, so it was only a matter of time for me to expand my Kit Card series to include various wildlife species. As the same with all of my others Kit Cards, these designs are **simple and easy to print**, but instantly recognizable as your favorite animal.

In the universe are billions of galaxies, in our galaxy are billions of planets, but there is Only One Earth. It is important to remind ourselves that we only get one chance to protect and conserve the natural beauty of this world, and it is my absolute pleasure to bring awareness and life to some of the species that are most endangered of never being seen again.

Current species included:

- African Forest Elephant
- African Lion (Male and Female)
- Bonobo **(P)**
- Dromedary Camel **(P)**
- Giant Panda **(P)**
- Hippopotamus
 - Moo Deng **(P)**
- Linnaeus's Two-Toed Sloth **(P)**
- Llama **(P)**
- Meerkat **(P)**
- Mountain Gorilla
- Polar Bear
- Raccoon **(P)**
- Ring Tailed Lemur **(P)**
- West African Giraffe
- White Rhinoceros

Animals above marked with “(P)” are located exclusively on Patreon, link below.

The kit card connectors were designed to easily snap away, but for the cleanest finish it is recommended to use snips to remove them. Each animal may have a slightly different assembly, but the fundamentals remain the same amongst all of them.

1. Snap all connectors to free each piece
2. Slide the ears into the cutout at the top of the head
 1. There are animals (such as the Lion and Gorilla) that use pegs and holes instead. For these you simply place the peg through the hole in the body and then squeeze the other side onto the peg.
3. Slide the larger connector into the cutout at the front of the body
4. Slide the smaller connector into the cutout at the back of the body
5. Align to the two cutouts on the legs with the connectors and slide in
6. Repeat for the last leg
7. Enjoy!

My slicer of choice is Bambu Studio and the included 3mf file for multi-color printing is set up with the Bambu Lab AMS system in mind. Let me know if I can improve the file for other software / printers.
