Filament: Sunlu PLA +

Black

Notes:

Best with 0.8 nozzle

Post-Printing =====

I designed it taking into account the tolerance needed to make the two parts fit without too much post-printing work. Please make sure you clean thoroughly the threads before trying to screw the two parts together. Some repeated screw-unscrew movements will be needed before arriving to the lowest-extension-configuration. Lubricant can speed-up the process of screwing the parts together for the first time.
