This model has been nominated for the Printables Awards 2024 in the category 'best 3D Model in Multi-Material Design'. Thank you for your votes!

Summary

This is a model of a Ford Shelby Mustang GT500 'Eleanor' in a kit / gift card style. Some characteristic details can be discovered.

After printing, the model can be assembled with the help of integrated connectors.

The wheels can be turned, but the car will not roll.

Versions

The complete set is available in a STL file for a one-color print.

There are 3MF-files with predefined colors intended for users of AMS or MMU. Versions with and without racing stripes available.

Otherwise, the chassis, rims and the tires must be printed separately.

The sets are also available with a complete chassis and with a separate front.

Print the complete chassis **if you have faith in your printer** (overhangs at the front) ;-)

if you are not sure, please print the set with the separate front.

Print

Print with **0.15 layer high or lower** to bring up the details.

No supports are needed.

Use 3 perimeters and 10% infill.

Post processing

The small struts can be removed really quickly and cleanly using a side cutter.

Assembly

The kit is easy to assemble. All parts fit together very well.

Use some grease for the hole in the rim so that the wheel turns more

easily.

If a part should be loose, superglue can be used.

Dimensions

The fully assembled model has the following dimensions

Height: 39 mm

Depth: 139 mm

Width: 56 mm

The complete kit card has the following dimensions when printed

Height: 32 mm

Depth: 140 mm

Width: 99.8 mm

Scaling will work in a low range due to the tolerances.

You ♥ Kit Car(d)s?
