Summary

A couple of tool holders I made for a 7cm high drawer.

Since making my first toolholder collection I have extended my library a bit, so here is a **Gridfinity tool holder** collection with the additional trays.

All trays have **a height of 4 units** and are **not stackable**. (You may put them on top, but not at the bottom)

Included in this set:

- A tray for the electric screwdrivers that are sold cheaply under various brand names on Aliexpress. **This tray includes hidden storage space under the screwdriver**, I store the USB charging cable there but you can also store bits if you like.
- A space-saving **tray for precision a screwdriver set**.
- A **tray for 13 wrenches**, mine range from 6mm to 19mm.

I also included the FreeCAD source files, so you can edit them on your own without any proprietary software. Please share the models if you make your own.

If you are in the EU and want to support my work, I can also print and send these models to you. Please contact me for an offer in that case. Or you can support me by buying something from **my shop**.
