Summary

This is a small sign made to label plants in your garden or yard. It is designed to be held by a galvanized metal stake.

This is the first model I've ever made! I made it so that I could label the plants in my recently renovated yard because my friends would often ask what the plants were.

It is held by a 12" galvanized stake that you can find here: <https://amzn.to/3zbbIHV>

I've found that it is easiest to add the text in the slicer, rather than creating a new model for each. In Bambu slicer, add text to the front of the sign, 1mm height, and change the filament color for the text object. Prints perfectly with no supports. Recommend ironing for best appearance.
